REPORT ON SQl PROJECT

Gervais Hatangimana.

29/5/2025

This is a report on a great project that I was tasked with by my tutor in order to hone and sharpen my skills in handling complex SQL queries. I downloaded dataset from kaggle website and used it to do the project. Having done the whole project I have realized that SQL is applicable A lot and very important in accessing electronically stored data. A couple of tools that I used to deal with the project was MySQL , online compiler SQL editor and Google chrome to research.

I solved fifteen very complicated questions testing different SQL queries and statements. Though the process was challenging A lot, I took it in stride and gave it my best. The little setbacks that I experienced fueled me to chase perfection in handling the project. In different ways I was able to better my SQL knowledge, skills and experience in terms of handling real-world data.

The data I obtained on kaggle to deal with the project was a perfect example of real-world data which sort of put me in a position that I believed I was dealing with some real world project and working for some company. In conclusion, this was a supreme experience that I have tucked under my belt and it has polished my skills and confidence in terms of SQL know-how.
